

Managing Periodontitis

When, Where and How?

Presented by,
Leyvee Cabanilla-Jacobs, DDS, MSD

2 H O U R C E

About

This lecture will highlight clinical cases demonstrating scientifically based guidelines to help in the successful management of the periodontal patient. The 2017 Disease Classification will also be briefly revisited along with a discussion of how it impacts current treatment options.

Educational Objectives:

- Review important clinical and radiographic findings that significantly affect diagnosis and the best treatment approach.
- Understand the pathophysiology of periodontitis and the healing process and how it relates to timing of treatment.
- Recognize current non-surgical and surgical treatment options available.
- Appreciate the importance of the dental hygienist in the interdisciplinary care of the periodontal patient.
