

Prolonged Tooth Maintenance vs. Extraction and Implants: Periodontal Realities

Presented by:
Leyvee Cabanilla-Jacobs
DDS, MSD

2 HOUR CE

About

The aim of this lecture is to present an algorithm that will address clinical deductive reasoning, based on the scientific literature and clinical evidence. Multiple clinical cases highlighting periodontal issues, treatment options and complications will be presented.

Educational Objectives:

- Recognize the most significant periodontal factors that influence the decision to save or extract an individual tooth.
- Identify appropriate treatment modalities that can improve prognosis to facilitate long-term tooth retention.
- Identify important factors based on current literature that can help ensure successful long-term implant therapy outcomes.
- Identify potential complications associated with implant therapy.
